

# SUMMER VACATION APPS

POSITIVE PARENTING

**16.5.2019**

---

- 1) **Cool Math** - Probably one of my favorite math sites, Cool Math is "designed for the pure enjoyment of mathematics." This interactive site features a plethora of fun games, puzzles, calculators and lesson plans.
  
- 2) **Science Bob** - Science Bob is a fun, interactive site that has several different areas for kids to choose from. There are videos, experiments, science fair ideas and a research help link with many fantastic links to other sites. Don't forget to click on the ["Whatever you do, DON'T CLICK HERE" button](#) (or not).
  
- 3) **Grammaropolis** - Grammaropolis is a fun, interactive site that helps students learn about the parts of speech. A great website to learn English grammar.
  
- 4) **NeoK12** - NeoK12 is a fantastic collection of videos, arranged by subject, that have been individually reviewed by K-12 teachers. The videos are all (at least

the ones I've seen) via YouTube, all the ads have been stripped, and all related videos removed which, for an educator, is a great thing! There are also quizzes, games and puzzles as well as a cool presentation creator that helps teachers or students create presentations within the site. Also cool is the [How it Works](#) section.

5) **Science With Me** - Kids love hands-on projects, and Science With Me is chock-full of fun science projects. You'll also find science movies, songs, coloring sheets, worksheets and stories to help kids learn scientific principles and science in a fun way.

6) **E-Learning For Kids** - e-Learning for Kids is a great site with some wonderful interactive learning games that are engaging and fun. Students click on their grade and can then choose from a list of games divided into subjects.

6) **Story Jumper** - Story Jumper is a wonderful site that allows children to create their very own books. You can create cover pages, add text, upload drawings or photos to illustrate your story, and you can use the

Story Jumper clipart gallery, too. One of the best things about Story Jumper is that it is easy for teachers to create and assign student accounts.

8) **Arts Alive** - Arts Alive is a performing arts educational website developed by the National Arts Centre of Canada. There are sections for [students](#), [teachers](#) and [parents](#) to learn more about the performing arts and ways to discover a greater appreciation of music, theater and dance.

9) **Math TV** - Math TV is an amazing collection of how-to videos in a variety of math subjects. Checking it out, I watched a video on how to multiply fractions and I (a teacher) learned a new method. Imagine what your students can learn. This site is free, but it does require you to register to be able to view the videos.
